Partnership Design Template Pack

Plain editable templates for synthesising partnership design decisions

Purpose
Use after the Excel and Word assessments to summarise the proposed partnership structure, financing pathway, risk allocation, institutional roles and implementation plan.

Design approach
No decorative elements, colour system or footer. All text and boxes are editable so branding and visual treatment can be added later.

Working Version 1

Master Partnership Design Template

Complete with conclusions from the diagnostic tools.

1. Opportunity

Challenge, intended users, geography, scale and intended outcome.

Source: Excel Opportunity Profile; Word Tool 3, section 2.

2. Demand and payment

Evidence of demand, payer or purchaser, payment pathway and affordability.

Source: Excel Scorecard (demand and financial dimensions); Word Tool 3, section 3.

3. Delivery model

Service or product, delivery actors, channels, standards, data and verification.

Source: Excel Scorecard (delivery dimension) and System Readiness; Word Tool 3, section 4.

4. Constraint and model

Primary binding constraint, root cause, selected partnership model and conditions.

Source: Excel Binding Constraints (confirmed constraint) and Model Selection; Word Tool 3, sections 5 and 6.

5. Actors and governance

Lead institution, partner roles, authority, coordination, decision rights and accountability.

Source: Excel Actor Map and Role Selection; Word Tool 1; Word Tool 3, section 7.

6. Capital pathway

Immediate financing need, instrument, provider, conditions, milestones and next source.

Source: Excel Capital Sequencing; slide 6; Word Tool 3, section 8.

7. Risk and legitimacy

Material risks, allocation, mitigation, trust, participation, inclusion and safeguards.

Source: Excel Risk Allocation; slide 7; Word Tool 3, sections 9 and 10.

8. Implementation and transition

Milestones, owners, dependencies, scale, refinancing, transition or exit pathway.

Source: slide 9; Word Tool 3, section 11; Word Tool 4.

Decision required

Decision now • conditions outstanding • next three actions • owners • review date

Model 1: Aggregation and Warehouse Platform

Use where fragmented or sub-scale opportunities need pooling and standardization.

What is being aggregated?

Assets, providers, contracts, receivables, projects, demand or cash flows.

Eligibility criteria

Quality, performance, safeguards, size, concentration limits and exclusions.

Standardization requirements

Contracts, data, reporting, servicing, verification and documentation.

Aggregator responsibilities

Origination, due diligence, pooling, servicing, reporting and coordination.

Portfolio economics

Volume, diversification, cash flows, losses, fees, reserves and operating cost.

Capital and credit support

Warehouse facility, first loss, guarantee, reserve, grant or technical assistance.

Data and verification

Portfolio data, audits, performance evidence, investor reporting and claims validation.

Take-out pathway

Refinancing party, conditions, timing, tenor, currency and capital-recycling pathway.

Governance and ownership

Platform owner, asset and data ownership, conflicts, accountability and transition.

Critical test

Does aggregation improve scale, risk diversification or transaction economics, and is there a credible take-out pathway?

Model 2: Project Preparation and Guarantee Platform

Use where opportunities are visible but preparation and specific risks block execution.

Pipeline and screening

Eligibility, strategic fit, readiness, additionality, prioritisation and drop criteria.

Preparation gaps

Technical, legal, ESG, financial, commercial, procurement and implementation gaps.

Preparation plan

Workstreams, budget, advisers, owner, timeline, decision gates and quality control.

Approval pathway

Policy, fiscal, procurement, permits, land, contingent liability and institutional approvals.

Revenue and payment

Payer, tariff, budget, reimbursement or offtake pathway, affordability and payment security.

Risk allocation

Payment, political, regulatory, completion, demand, performance, currency and social risks.

Mitigation instruments

Guarantees, reserves, insurance, liquidity, technical assistance and attached conditions.

Procurement and contracts

Procurement route, counterparties, standards, allocation, remedies and lender requirements.

Capital and close

Preparation funding, debt, equity, conditions precedent, financial close and disbursement.

Platform governance

Pipeline decisions, conflicts, reporting, accountability, cost recovery and recycling.

Gate to proceed

Preparation is sufficient for credible procurement and due diligence, the payment pathway is demonstrable, and risks are allocated before guarantees or other mitigation instruments are selected.

Model 3: Predictable Delivery Network

Use where providers exist but purchasing, standards, verification or payment are fragmented.

Purchaser and payment

Purchaser or payer • contracting mechanism • budget • payment timing • remedies.

Users and demand

User eligibility • service need • access • affordability • adoption • feedback.

Provider network

Provider eligibility • capacity • coverage • quality • continuity • exit rules.

Service package

Services or products • geography • volume • unit of payment.

Standards and verification

Accreditation • delivery standards • data • claims • evidence that triggers payment.

Payment flow

Invoice or claim • verification • approval • payment • reconciliation • dispute process.

Working capital and liquidity

Payment gap • receivables finance • liquidity facility • reserves • financing terms.

Performance management

Monitoring • incentives • sanctions • capacity support • corrective action.

Accountability and safeguards

User feedback • grievances • inclusion • protection • response standards • public reporting.

Network governance

Network manager • purchaser oversight • provider voice • decisions • conflicts • escalation.

Scale and transition

Provider expansion • geographic replication • institutionalisation • long-term ownership.

Critical test

Can verified delivery lead to reliable and timely payment, while maintaining quality, access, accountability and sufficient provider liquidity?

Capital Pathway Template

Match each instrument to a stated constraint and define the evidence required for transition.

Stage / purpose	Constraint addressed	Capital or support	Provider	Key terms	Conditions / milestone	Next source / transition
Foundations						
Preparation						
Early deployment						
Scale						
Recycling / transition						

Additionality	Readiness condition	Capital discipline
Why is this support necessary, and what participation or capability does it enable?	What must be true before the instrument is deployed or the next source enters?	Capital follows readiness and should not substitute for demand, preparation or operating-model clarity.

Risk Allocation Template

Allocate risks before choosing instruments. Score 1 to 5 as in the Excel Risk Allocation tab.

Risk category	Risk event / description	Likelihood	Impact	Current holder	Best-placed holder	Mitigation	Residual risk
Demand / adoption							
Payment / counterparty							
Political / regulatory							
Construction / completion							
Performance / operations							
Foreign exchange / rates							
Community / social licence							
Data / verification							

Control	Absorption	Monitoring
Who can reduce the probability of the risk?	Who can bear the consequence if the risk occurs?	What trigger leads to action or contingency?

Institutional Role Template

Assign roles based on fit, not ambition. Record the role boundary and transition.

Role	Institution	Mandate / authority	Capability / resources	Legitimacy / risk appetite	Commitment required	Boundary / transition
Funder						
Convener						
Ecosystem orchestrator						
Purchaser						
De-risker						
Aggregator						
Operator						
Accountability partner						
Domestic capital mobilizer						
Community-facing partner						

Unassigned or contested roles
Which essential functions still lack a credible owner? Which roles overlap or require a formal decision? Draw on Excel Role Selection (column K) and add rows for any other roles it identifies.

Implementation and Decision Template

Translate the design into gated actions, evidence and formal decisions.

0–90 days	3–6 months	6–12 months	12–24 months	24+ months
Decision / gate	Decision / gate	Decision / gate	Decision / gate	Decision / gate
Deliverables	Deliverables	Deliverables	Deliverables	Deliverables
Owner	Owner	Owner	Owner	Owner
Dependencies	Dependencies	Dependencies	Dependencies	Dependencies
Completion evidence	Completion evidence	Completion evidence	Completion evidence	Completion evidence
Next review	Next review	Next review	Next review	Next review

Decision	Conditions and escalation	Immediate actions
Approved • conditional • deferred • redesign • stopped	Outstanding conditions • decision authority • escalation route	Top three actions • owners • deadlines • completion evidence
